ETHERHELIX™

The World's Smallest GPS Helix Antenna
for High-Performance, Mission-Critical Applications

EtherHelix™ is the world's smallest external GPS antenna measuring only 35mm in length – more than 25% shorter than any other antenna on the market with no performance trade-offs. It can be tuned for various satcom frequencies and polarizations (RHCP or LHCP). EtherHelix™ has a high tolerance to frequency shifts to resist antenna de-tuning; improving reception for exceptional coverage inside buildings, vehicles or other areas where weak signals and signal reflection occur.

- Measures only 35 x 15mm
- IP68 rated protection from dust and water
- Standard SMA male connector
- High selectivity (minimizes need for filters)
- RoHS / lead-free design
- Designed and manufactured in the USA
